

Jumbo Bag Filling System

Weigh N Pack's Jumbo bag filling system is designed for filling of powder, granules, and other similar products which has good flowability character. As during filling operation material will not get any mechanical movement in case of filling of material with poor flowability (material with sticky nature) there will be need of another filling technology.

Packing machine is equipped with automatic up-down filling head and vibrating table at bottom, by which during filling cycle, with use of filling stoppage bag will goes down and placed on to vibrating table so that material can get densified. After the stoppage filling cycle will continue as regular procedure automatically.

Features: -

- Bag length and width : 800 x 800, 1000 x 1000 (mm)
- Bag height : 600 to 1500 (mm)
- Bag spout diameter : 300 (mm)
- Vibrating table for densifying material during filling process
- Filling head up-down operation for easy access of bag spout and bag hook
- Manual Bag placing and auto bag releasing on vibrating table / drive roller type table
- **Option** : Drive roller type table with vibrating unit for automatic fillet bag conveying
- **Option** : Flap type doser for granular type products (butterfly valve is used as regular practice)
